Name: Mounia Laassiri
Research Identifier (ORCID): [0000-0001-7146-4468](https://orcid.org/0000-0001-7146-4468)
Email: mlassiri@bnl.gov
mounia.laassiri@cern.ch
mounia.laassiri@gmail.com
Date of CV: January 26, 2025

Actual status

- **May 2024 - Present** Postdoctoral Researcher, Brookhaven National Laboratory, Upton, NY USA
Project summary: ATLAS Experiment and African School of Physics
- **October 2024 - Present** Senior Research Associate, University of Johannesburg (UJ), South Africa
Project summary: TLAS Experiment, upgrade work on fibre optic sensors, and contributions to the discipline and teaching across the African continent.
- **Jan. 2025 - Present** Member-at-Large of the American Physical Society (APS) Forum on International Physics (FIP)
What is APS— FIP?: APS— FIP is a home for physicists who are passionate about advancing the international diffusion of physics knowledge and fostering collaborations among researchers across the world.
- **Oct. 2024 - Present** Trustee of the Friends of the African School of Physics (FASP)
What is FASP?: FASP is a not-for-profit NGO based in the USA to seek and secure resources to support the ASP activities in Africa.
- **Sep. 2024 - Present** Member of the Governing Council (GC) of the Arab Physical Society (ArPS)
What is ArPS?: ArPS is a Non-Governmental and Non-Profit Organization that aims to spread and promote physics knowledge and its advancement, improve scientific education, research and human capacity building in the Arab world. Arab world includes all countries having Arabic as an official language. ArSP fosters diversity to ensure that everyone has the same opportunities, regardless of gender, ethnicity, religion and culture.
- **Mar. 2023 - Present** Editor of the African Physics Newsletter (APN), American Physical Society
What is APN?: APN is a quarterly electronic publication that covers physics in Africa, compiled and reported by an Editorial Board of African physicists from various regions of the continent. APS has published the newsletter since its launch in 2019.
- **Jan. 2023 - Present** Member of the International Organizing Committee (IOC) and Board of Trustees (BoT) of the Friends of the African School on Fundamental Physics and Applications (ASP)
What is ASP?: APS is a biennial physics school aimed at improving the quality of higher education in Africa..
- **Apr. 2020 - Present** Co-convener of the Young Physicists Forum (YPF) at the African Strategy for Fundamental and Applied Physics (ASFAP)
What is ASFAP— YPF?: ASFAP— YPF facilitates engagement and networking of African students, postdocs, and anyone up to ~10 years past their highest degree in the ASFAP Process.

Education

- **2014-2019** Ph.D. in Physics and Nuclear Instrumentation, Science Team of Matter and Radiation (ESMaR), Physics Department, Faculty of Sciences, Mohammed V University Rabat, Morocco
Title: Neutron Signals Nonnegative Tensor Blind Source Separation: Application to Neutron/Gamma Discrimination
Supervisor: Prof. Rajaa Cherkaoui El Moursli & Dr. El-Mehdi Hamzaoui
- **2011-2013** Specialized Master's Degree: Security of Computer Networks and Embedded Systems (Sécu.RISE), Design and Systems Laboratory, Physics Department, Faculty of Sciences, Mohammed V University Rabat, Morocco
Title: Development of Wavelet Based Tools for Processing and Characterising the γ -ray Spectrometry
Supervisor: Prof. Mohamed Jedra & Dr. El-Mehdi Hamzaoui
- **2008-2011** Bachelor's Degree in Fundamental Physics, Physics Department, Faculty of Sciences, Mohammed V University Rabat, Morocco
Title: Ionizing Radiation and Radioprotection
Supervisor: Prof. Rajaa Cherkaoui El Moursli

Teaching and related activities

- **Jul. 7-21, 2024** Tutorial on Events Generation & Detector Simulation using Geant4— a simulation toolkit, The 8th Biennial African School of Physics (ASP2024), Cadi Ayyad University, Marrakesh, Morocco
- **Nov 28- Dec 9, 2022** Tutorial on Events Generation & Detector Simulation using Geant4— a simulation toolkit, The 7th Biennial African School of Physics (ASP2022), Nelson Mandela University (NMU), Port Elizabeth, South Africa
- **2015-2016** Temporary teacher of Practical work: Bachelor in Physical Sciences, Nuclear Physics Module at Department of Physics, Faculty of Sciences, Mohammed V University Rabat, Morocco

Scientific and societal contributions

Organisation of conferences, workshops ...

- The 4th African Conference on Fundamental and Applied Physics, ACP2025
September 14-20, 2025, at University of Lome, Togo
Co-organizer
- The 8th Biennial African School of Fundamental Physics and Applications, ASP2024
July 7-21, 2024, at Cadi Ayyad University, Marrakesh, Morocco
Co-organizer
- The 3rd African Conference on Fundamental and Applied Physics, ACP2023
September 25-29, 2023, at Nelson Mandela University, George Campus, South Africa
Co-organizer
- ASFAP: YPF Physics Working Group Introductions Series
June 8, 15, 22, 19 2022, Virtual event
Co-organizer
- ASFAP: Young African Physicists' Workshop—Challenges and opportunities
January 26, 2022, Virtual event
Co-organizer

Science outreach

- **Early Career Panel Discussion— "Beauty of Physics"**
September 25, 2023, at Nelson Mandela University, George Campus, South Africa
- **Early Career African Physicists: "ASK An ASP (Alumni)"**
September 29, 2023, at Nelson Mandela University, George Campus, South Africa

Previous work experience

- **Jun. 2022 - May 2023** Postdoctoral Researcher, Helsinki Institute of Physics, University of Helsinki, Finland
Activity name: **POSEIDON - Position-sensitive detectors for nuclear fuel imaging**
Project summary: A feasibility study of a passive gamma emission tomography (PGET) device that makes use of state-of-the-art 3D position-sensitive semiconductor gamma-ray detectors will be performed. During the first year, a Monte Carlo simulation framework was set up and validated in measurements in Helsinki and Uppsala. After a 3-year activity, the benefit of 3D position-sensitive detectors for PGET applications such as the imaging of spent fuel, fuel irradiated in the context of the development of new reactor designs, fuel pin containers and nuclear waste will be established.
- **Dec. 2019 - May 2022** Member of Nexus Ubuntu Reactors- Modelling Nuclear Reactors with Geant4, University of Johannesburg (UJ), South Africa
Activity name: **Ubuntu Reactors: Geant4 modelling for Nuclear Energy**
Project summary: The accurate modeling of nuclear reactors is essential for design, regulation, safety analysis, operations and forensic analysis. Geant4 as a framework for general computer simulation of particle tracking in complex environments and materials.

Reresrch Activities

- | | |
|---|---------------------|
| ATLAS ITk strips Phase II tracker upgrade | May 2024 - Present |
| <ul style="list-style-type: none">– Working on various tasks related to the ATLAS Phase II tracker upgrade, focusing on the strips barrel at Brookhaven National Laboratory.– Developing interlock systems to ensure safe thermal cycling of silicon strip modules, enhancing operational safety and reliability.– Involved in quality control (QC) for the ITk strips barrel modules, utilizing a coldjig setup for temperature control, data acquisition (DAQ), and hardware monitoring.– Serving as US contact of the coldjig software. | |
| POSEIDON - Position-sensitive detectors for nuclear fuel imaging | Jun 2022 - May 2024 |
| <ul style="list-style-type: none">– Studied the performance of a Passive Gamma Emission Tomography (PGET) device utilizing state-of-the-art 3D position-sensitive semiconductor gamma-ray detectors.– Developed a Monte Carlo simulation framework using the Geant4 toolkit to simulate detector performance, validated through code-to-code verification and experimental data from the Helsinki Institute of Physics (HIP)/University of Helsinki and Uppsala University.– Explored the potential of Compton imaging to trace the origin of gamma rays along spent nuclear fuel assemblies (SFAs), enhancing the precision of nuclear fuel imaging. | |

Evaluation of Position-Sensitive Virtual Frisch-Grid CZT Detectors Jun 2023 - Dec 2023

- Fabricated and tested pixelated CZT detectors for gamma-ray detection.
- Investigated the use of CZT and germanium detectors for position-sensitive gamma-ray detection, contributing to advancements in 3D imaging technologies.
- Employed two-site event reconstruction to demonstrate the array’s Compton imaging capability.

Liquid Argon Field Calibration System (LArFCS) Oct - Dec 2019

- Developed a dedicated system to calibrate the field response functions for the wire-readout-based single-phase Liquid Argon Time Projection Chamber (LArTPC), enhancing TPC signal processing for automated event reconstruction.
- The project contributed to the MicroBooNE data analysis and provided critical inputs for protoDUNE and DUNE experiments.
- Constructed a LabVIEW-based DAQ program for LArFCS using commercial VME modules from CAEN, avoiding the complexity of the existing MicroBooNE NEVIS FPGA readout system.

Ubuntu Reactors: Geant4 modelling for Nuclear Energy Jul - Oct 2019

- Developed a stochastic Monte Carlo (MC) simulation of a High Temperature Gas Cooled Reactor (HTGCR) using the Geant4 framework.
- Implemented basic neutronics, geometrical discretization, time slicing, and intra-slice persistence for studying spatial variations of physical parameters.
- Integrated thermal hydraulics via workflow scheduling and validated thermal macroscopic cross-section behavior, fission, burn, decay, and differential energy deposition processes.
- Conducted validation of Xenon effects on neutronics, criticality, and core behavior over multiple time steps.

Ph.D. Research: Software n/γ Discrimination Using Nonnegative Tensor Factorization (NTF) Algorithms Nov 2014 - Apr 2019

- Applied Nonnegative Tensor Factorization (NTF) algorithms to extract independent components from signals recorded at the fission chamber preamplifier’s output, achieving software-based n/γ discrimination.
- Simulated neutron flux in the TRIGA Mark II reactor using Monte Carlo methods with Geant4 and Garfield++ to model the fission process, energy deposition, and ionization in the fission chamber.
- Integrated Magboltz and Heed within Garfield++ for analysis of electron-ion drift lines and induced signals, providing a detailed simulation of stochastic events and detector response.
- Processed output signals using the NTFLab toolbox in MATLAB®; identified NTF1 and NTF2 as the most effective algorithms for data analysis, achieving separation of neutron and γ -ray signals.
- Demonstrated successful n/γ discrimination without prior knowledge of signal mixture, validated by analyzing signal-to-noise ratio (SNR) and normalized correlation functions between pure neutron and γ -ray signals.

Computer skills

- **Computer Skills** L^AT_EX, Office Suite
- **Programming Language** C/C ++, Java/JEE, Mathematica, Maple, Matlab, Python XML
- **Software** LabVIEW
- **OS** Windows (XP, 200X, Vista, 10), Linux (Ubuntu, Debian, Scientific linux)

- **Particle Transport Simulation** Geant4, Garfield++, MCNP5
- **Data Analysis** ROOT, Matlab, IDL
- **Blind Source Separation Algorithms** ICALab, NMFLab, NTFLab

Language skills

- | | |
|---|-----------------------------|
| • Arabic Excellent (Mother Tongue) | • English Good level |
| • French Excellent | • Finnish fair |
